

SOUTH FRASER PERIMETER ROAD PROJECT

Hedgerows were planted to promote high flight patterns for birds.

Bumble Bee Habitat was developed to help crop pollination which helps to produce a higher yield of blueberries and cranberries for the local farmers

The **72nd Street Agricultural Overpass** will provide safe and efficient access for farmers, utility companies and emergency responders to travel over SFPR.

 Agricultural Enhancement

Key Features of This Section

The **Delta Agricultural Enhancement Strategy** was developed in consultation with the Delta Farmers' Institute, Agricultural Land Commission, Corporation of Delta, and local farmers. It includes:

- \$20 million of irrigation system improvements to bring fresh water to more than 15,000 acres of farmland in Delta.
- Topsoil recovery project, which reclaimed approximately 100,000 cubic metres of nutrient-rich topsoil that was used to level over 200 hectares of adjacent farmland.
- Four agricultural overpasses in Delta (28 Avenue, Highway 99, 60th Street, 72nd Street) improve safety and reliability for farmers.
- The Burns Drive Extension between 88th Street and 72nd Street, which improves access to agricultural properties in east Delta.
- Level railway crossings at 64th Street and 36th Avenue replaced with overpasses to improve farm vehicle transportation and safety.
- New access to the Vancouver Landfill from Highway 99 to remove landfill traffic from Burns Drive (more than 400,000 truck trips per year), improving travel for local traffic and farm vehicles.
- Improved drainage infrastructure to reduce flooding.
